**To whom it may concern.**

I am an Application Security Especialist, my latest experiences are as a Linux Security Engineer and also as a Cybersecurity Researcher in Germany.

As Linux Security, I performed security tests on the company's Linux operating system, fixed vulnerabilities in C/C++, in addition to configuring TeamCity and Jenkins pipelines. It was also my responsibility to perform SAST and SCA vulnerability tests and perform vulnerability management. As a Cybersecurity Researcher, it was my responsibility to create new compliance tests for OpenVas aimed at Linux and Windows, seeking to correlate vulnerabilities in the Office Package, Databases, Chrome, among others.

In the past I worked in Nova8, where I have a lot of experience in the area of Application Security, more specifically, in SAST, DAST, SCA and IAST. I was responsible for the Pre Sales Area, Techinician and Support, in which my job was consists of monitoring, delegating and coordinating actions to find the root cause and define a solution to the problems claimed. At the same time I am was also responsible for the coordination of projects related to Sales, besides being a representative for project management of Checkmarx SAST Projetcs in Brazil.

This position was has helped me to improve my technical knowledge of Nova8 portfolio, to improve my leadership skills and my analytical evaluation skills in order to help in the definition of a solution for the discussed issues. It has also helped me to improve my skills in conflict management during discussions in involved groups. In parallel, in an effort to involve myself more with the data revolution trends, I have also supported the development of a dashboard for my team in ELK.

Currently, I also conduct seminars and lectures on the topic of Application Security, Development of modern applications and implementation of security on CI/CD pipelines in order to bring the knowledge I have to as many people as possible.

I also have a Podcast together with 3 more Brazilian friends to spread the DevSecOps culture whose name is called "DevSecOps Podcast" the content is in PT-BR but we are starting to invite international guests where the content will be broadcast in English too.

I believe my previous experiences have prepared me to occupy this position. I am eager to learn and improve myself and this challenge would be a great opportunity for the growth of my career.

Kind regards,
Marcos Santos
